GAMES

INTRO

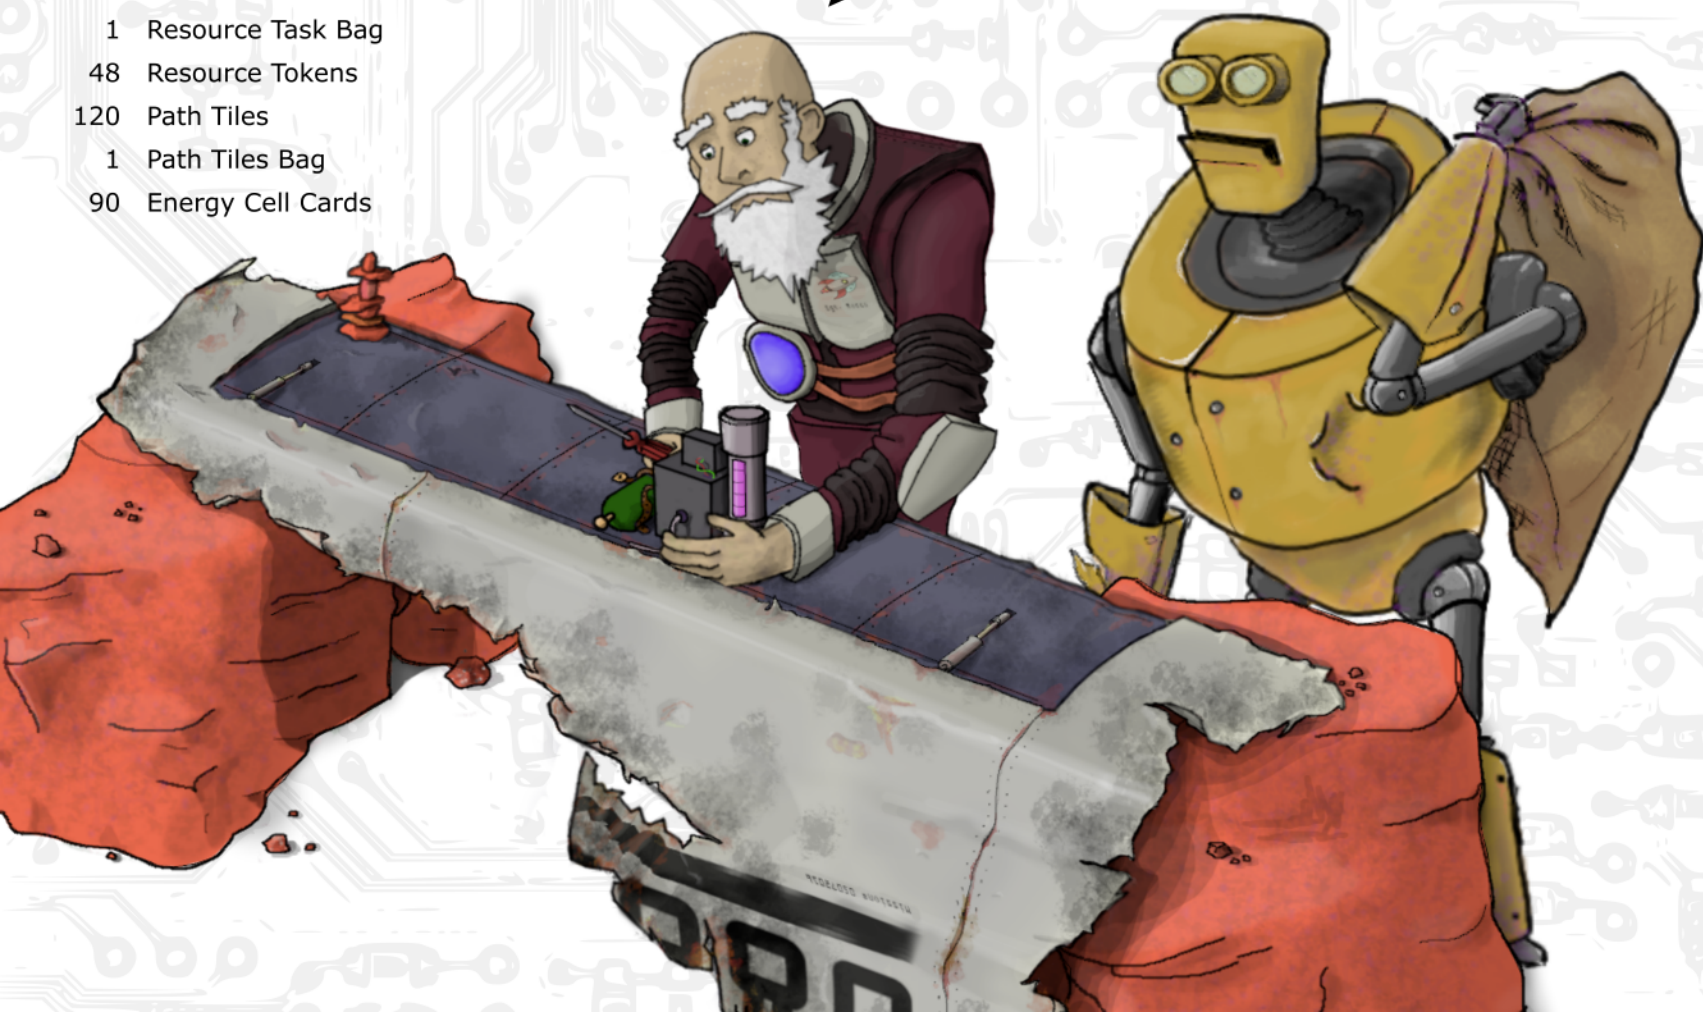

After being stranded on the only habitable planet within light years, Rocco was forced to make a decision: give up or survive. Well, not only did he choose survival, but after many successful years, when he sent out his repurposed Research Robots into the unforgiving terrain, he decided he would make their annual Resource gathering journey interesting and pit them against one another! The Robot who could gather the needed Resources first and return home would be the winner and would receive an extra special upgrade!

COMPONENTS LIST

- 1 Gameboard
- 6 Playerboard
- 6 Robots
- 24 Skill Cubes
- 6 Resource Drive Tokens
- 36 Resource Task Tokens
- 1 Resource Task Bag
- 48 Resource Tokens
- 120 Path Tiles
- 1 Path Tiles Bag
- 90 Energy Cell Cards

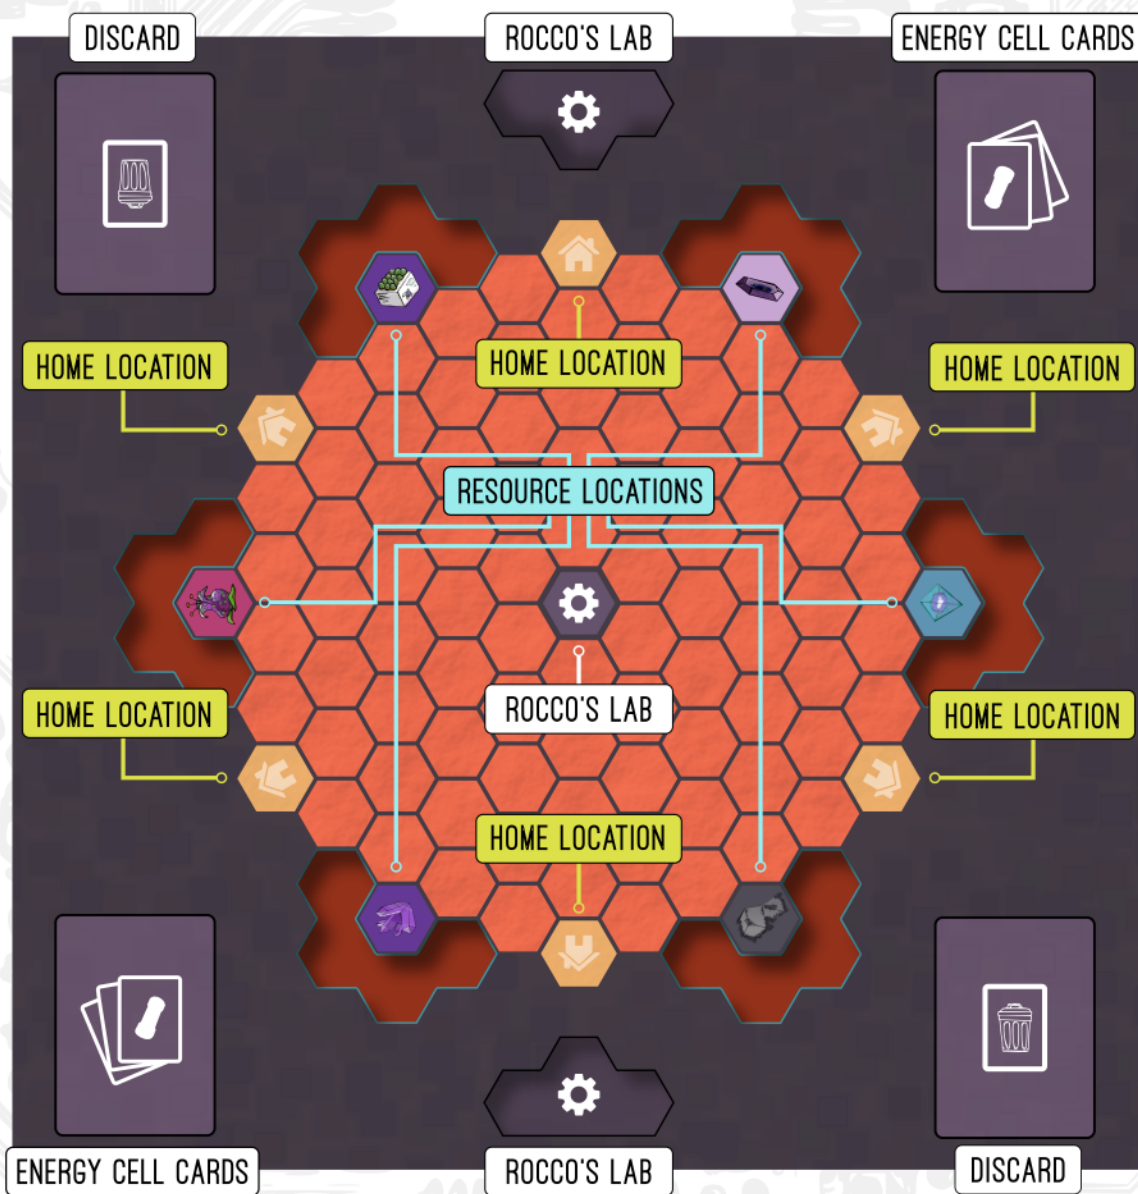

TIP #1:

TRY TO FINISH YOUR ROUTE IN THE SAME TURN
YOU COLLECT A 2ND RESOURCE OR OTHER
ROBOT'S MIGHT HAVE TAKE ISSUE WITH THAT.

BOARD SETUP

- Place the **Gameboard** in a central location between all **Players**
- Sort the **Resource Drives** () into **ROCCO'S LAB** indicated with the () Icon on the **Gameboard**
- Sort all **Resources** into their corresponding **RESOURCE LOCATIONS** around the **Gameboard**
- Shuffle all **Energy Cell Cards**  into 2 piles and place them onto both marked **Energy Cell Card** locations on opposite corners of the **Gameboard**

PLAYER SETUP

The starting player will be the last person use a telescope.

The player will select a **Robot**, corresponding **Home Tile**, and **Playerboard**.

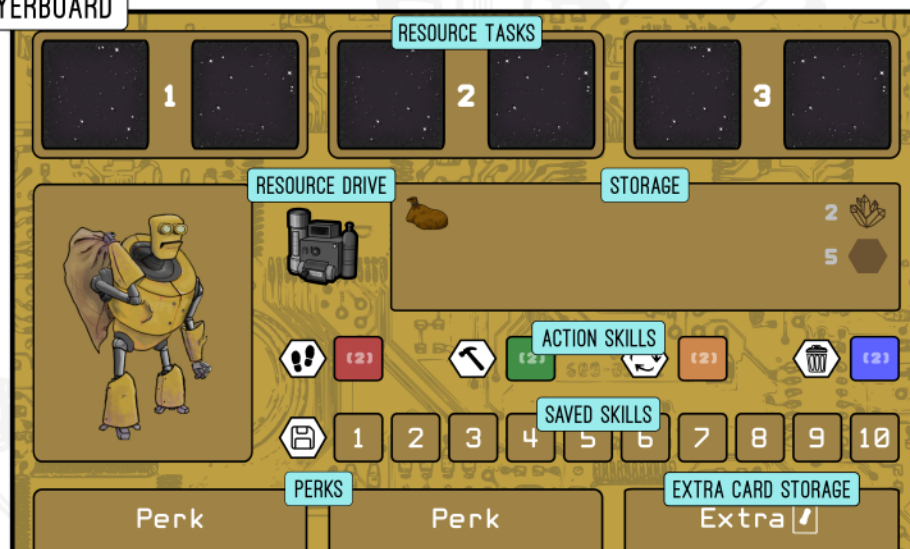

ROBOT

HOME TILE

PLAYERBOARD

Place their **Skill Cubes** on the **Playerboard** in the corresponding **Action Skill** color. Match the value facing up on the **Skill Cube** with the starting value found in the corresponding square.

Pick a starting location and place their **Home Tile** on top of it

Then the player will draw
4 **Energy Cell Cards**

PLAYER SETUP CONT...

Draw 2 **Resource Tasks** from the **Resource Task Bag** and place them at the top of the **Playerboard**.

TIP #2:
BEEP! BOOP!
BEEP!

RESOURCE TASKS

Each player will use their **Robot's Action Skills** (Move, Build, Alter, Remove) to help traverse the map to obtain a **Resource Drive** () which is required for the **Robot** to carry one pair of **Resources**. Once they have traversed the map, retrieved a **Resource Drive**, and obtained **Resources** they have been tasked with, the player will return their **Robot** home to store them.

HOW TO WIN

First player to complete all 3 of their **Resource Tasks** will be victorious!

GAME PLAY

On each player's turn, they can power their **Action Skills** by discarding **Energy Cell Cards**, or they can perform the action listed on the **Energy Cell Card** in their hand and then discarding it. Once the player has used all of the cards in their hand, their turn is over, and they conclude their turn by drawing 4 more **Energy Cell Cards**.

The total amount to be used from an **Action Skill** powered up using **Energy Cell Cards** is determined by multiplying the number of **Energy Cell Cards** being discarded with the face up value of the corresponding **Skill Cube**.

$$2 \text{ Energy Cell Cards} \times \text{Level 2 Move Skill} = 4 \text{ Path Tile Steps}$$

ACTION SKILLS

MOVE

For each **Movement**, the player may move their **Robot** to any connected **Path Tile**.

BUILD

For each **Build**, the player will draw a random **Path Tile**.

Path Tiles can then be placed on the **Gameboard** with either side up. If the player does not wish to place a **Path Tile** at that time they can alternatively store up to 5 **Path Tiles** in their **Robot's Storage**.

ALTER

For each **Alter**, the player can flip or rotate any regular **Path Tile**.

REMOVE

For each **Removal**, the player can remove any normal **Path Tiles**.

SAVING ACTION SKILLS

When using **Action Skills** the player can choose to **Save** all of or a partial amount of a **Skill** they have used **Energy Cells** to power instead of using it; saving it for later. In order to **Save** a **Skill** the player will move the corresponding **Skill Cube** of the **Skill** to the **Saved Skill Value**.

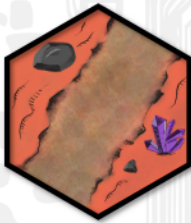

TIP #3:

BZZRT! BRRRT! BUUUURTZ!

PATH TILES

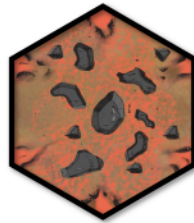

REGULAR TILES

The **Robot** will need to form a path to traverse across the **Map** for gathering **Resources**, to do this the player will need **Path Tiles**. Each **Path Tile** has a front side that can easily be traversed, and on the back side there is either a pile of **Debris** which is difficult to move through, or there is a **Pitfall** that cannot be passed through.

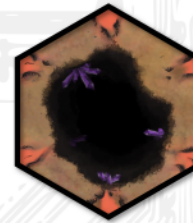

PATH

1 **Move** to traverse

DEBRIS

Connects to all adjacent **Path Tiles**
2 **Moves** to traverse

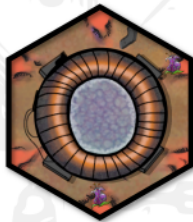

PITFALL

Cannot be traversed

SPECIAL PATH TILES

Along with the **Regular Path Tiles**, there are also **Special Path Tiles** that offer special abilities as well. There are 3 different **Special Path Tiles** available; a **Teleporter**, a **Directional Path**, and an **EMP Cage Tile**.

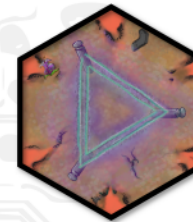

TELEPORTER

The **Teleporter Tile** can be traversed from one **Teleporter Tile** to another as if they were adjacent **Path Tiles** or the **Robot** may choose not to use the **Teleporter** and continue along the path of any **adjacent Path Tile**.

DIRECTIONAL PATH

Directional Path Tiles can only be traversed in the direction specified on the path.

EMP CAGE

When a player places an **EMP Cage Tile** they also place another **Robot** inside of the **EMP Cage** as well. The trapped **Robot** will then have to discard 4 **Energy Cell Cards** to escape to **Rocco's Lab**.

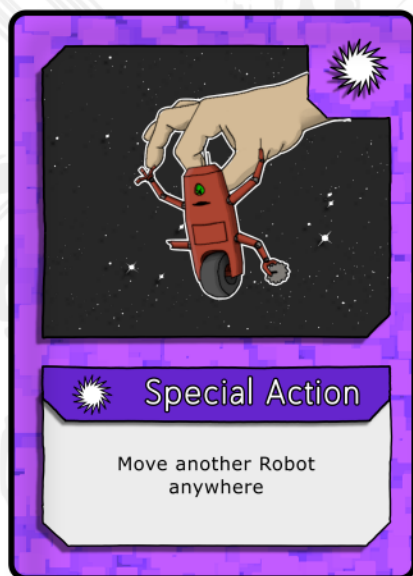

ENERGY CELL CARDS

Instead of using the **Energy Cell Cards** to power a **Robot's Skills** a player could alternatively choose to take the action listed on the card. These actions are broken up into 5 different categories; **Actions**, **Special Actions**, **Perks**, and **Upgrades**.

ACTION CARDS

A unique **Action** that will either assist in the **Robot's** journey to gather **Resources**, or it will allow the player to hinder another **Robot's** journey.

SPECIAL ACTION CARDS

A rare **Action** that will give a much greater advantage or disadvantage to the **Robot** that it is applied to.

ENERGY CELL CARDS

PERK CARDS

A passive bonus to use on each turn after the **Perk Card** has been successfully **Drafted** by the player.

To **Draft** a **Perk Card** you will play the card face down and tuck it under an open **Perk Slot** on the **Playerboard**, on the following turn that **Perk Card** can then be flipped over and the **Perk** listed on the card may now be used once per turn until that card has been removed.

Perk Cards can be removed either by the player during their turn to use as an extra **Energy Cell** or they could be forced to discard the Perk by another player.

UPGRADE CARDS

Increases the level of the **Action Skill** on the card. All **Upgrade Cards** can only be used at **Rocco's Lab** at the center of the **Map**.

RESOURCES

RESOURCE TASKS

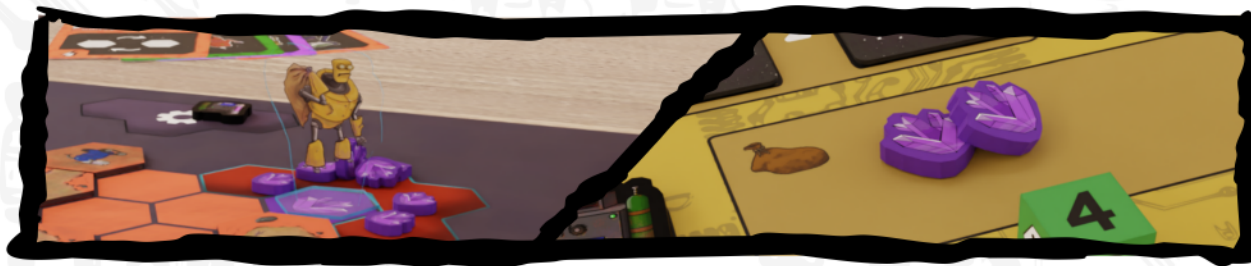

Throughout the game the player will be assigned 3 **Tasks** to complete. Each of these **Tasks** will be a set of **Resources** for the **Robot** to gather. The player will start with their first **Task**, and each subsequent **Task** will be assigned after completing the previous one. The player can get the next **Task** assignment for their **Robot** by drawing 2 **Resources** from the **Resource Bag** and placing them on the **Playerboard** in the next open **Task** slot.

GATHERING RESOURCES

There are 6 unique **Resources** found scattered around the **Map**. These **Resources** are unfortunately too much for a **Robot** to carry in their current state. The **Robot** will need a **Resource Drive** to give them the ability to carry 2 **Resources**. To obtain a **Resource Drive** a player needs to either stop on or pass through **Rocco's Lab** in the middle of the **Map**.

After obtaining a **Resource Drive** the **Robot** may navigate around the **Map** to collect the **Resources** they have been tasked with gathering. To gather a **Resource** the **Robot** has to land on the **Resource Location Tile** and then they may place 1 or 2 **Resources** into their **Robot's Storage**.

Once a **Robot** has gathered the **Resources** they plan to carry, they should return **Home** to store the **Resources** they have gathered. Once the player is on their **Home Tile** they may move the **Resource Tokens** to their corresponding **Resource Task Token** to indicate that the **Resource** has been successfully gathered.

After successfully gathering any **Resources** the **Resource Drive** will have become worn down and in need of repairs. The **Resource Drive** is to be returned to **Rocco's Lab** by placing it in one of the areas on the **Gameboard** marked with the symbol for **Rocco's Lab** (⚙️). At this point a new **Resource Drive** will be needed for the next **Resource Task**.

STORAGE

The **Robot's Storage** is not just for gathering **Resources**, but can be used for storing extra **Path Tiles** and an extra **Energy Cell Card** as well. If the player does not wish to use the **Path Tiles** they drew while using the **Build Skill** they may store them in their **Robot's Storage** on their **Playerboard**. Any stored **Path Tiles** may be used on any subsequent turn without spending **Energy Cells** as that cost has already been paid.

If a player wishes to save an **Energy Cell Card** in their hand to be used later, they can store it in the **Extra card Storage Slot** found on the **Playerboard** and they do not have to use that card during their turn.

As nice as it is for a player to store extra items, there are limitations to what their Storage can hold:

Energy Cell Cards - 1

Resources - 2

Path Tiles - 5

TIP #4:

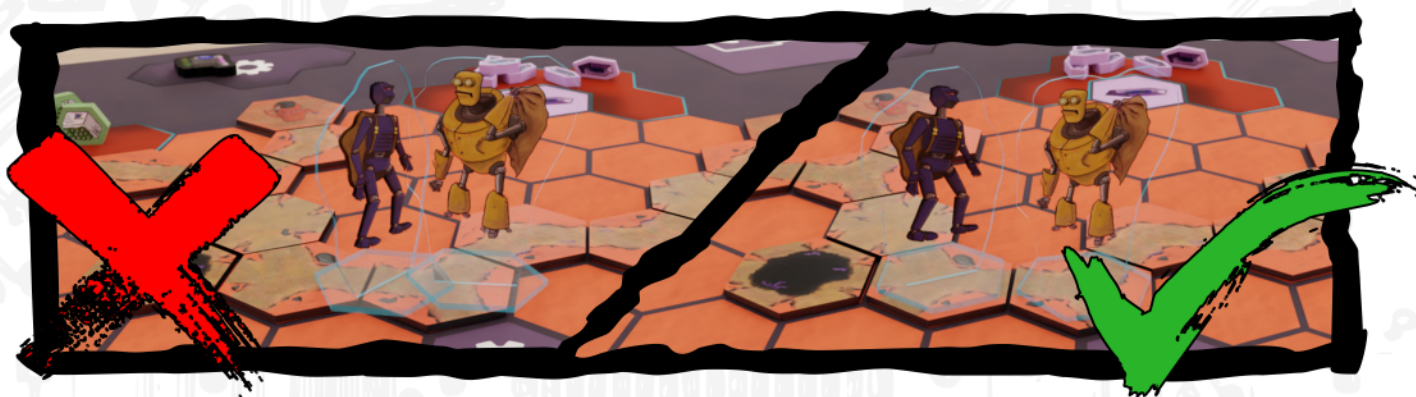

BLEEP BLORP BEEP BEEP,
BEEP BEEP **BEEP** BOOP!

ADDITIONAL RULES & CLARIFICATIONS

MOVING THROUGH OTHER ROBOTS

When moving across the **Map**, a player may move through other **Robots**, but may not end their turn on the same **Path Tile** as another **Robot**.

LOSING PERK CARDS

If an active **Perk Card** has been removed and discarded, the effects of that **Perk** still apply during the turn in which it was initially active.

DROPPING & SWAPPING RESOURCES

If a **Robot** is forced to drop a **Resource** or lose a **Resource Drive**, the player will then be forced to put the **Resources** that are in the **Robot's Storage** on the **Path Tile** they are currently residing on. At this point any other **Robot** can journey to the same **Path Tile** and pick up the dropped **Resources** (Provided they have a **Resource Drive**).

If **Resources** are residing on a **Path Tile** that is subsequently removed, then those **Resources** are returned back to their **Resource** location.

If a **Robot** is carrying 2 **Resources** and wish to carry a different **Resource**, they can swap a **Resource** they are currently carrying in their **Storage** for the new desired **Resource** they are next to.

ALTERNATE GAME MODES

ALPHA MISSION

One of each **Resource** will be gathered. The **Resources** may be gathered in any order.

CHANGES TO THE GAME SETUP:

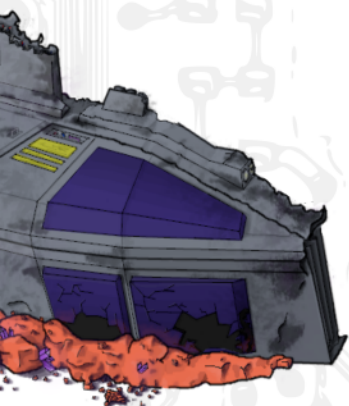

Place 1 of each **Resource Token** at the top of the **Playerboard** in the **Resource Task** slots.

VAST SPACE

One of each **Resource** will be gathered, but the **Resource Tasks** are made up of **Resources** that are located on opposite ends of the **Map**. The player may choose what order they assign the **Resource Tasks** during the setup. After the start of the game, the **Resource Tasks** cannot be gathered out of order for the duration of the game.

CHANGES TO THE GAME SETUP:

Place 1 of each **RESOURCE TOKEN** at the top of the **PLAYERBOARD** along with their corresponding opposite **RESOURCE**, in an order determined by the player.

THOSE ROBOTS HOW TO
TALK

THANKS

I wanted to first and foremost say thank you to you; the player, for supporting Goober Gobber Games by purchasing our inaugural game, **Rocco's Robots**. If it weren't for your support this would have never become a reality. Also, without the support of these people that inspired me to be creative, and those that helped play test the game, you wouldn't be playing **Rocco's Robots** today.
